

SPINTECH® Y-FILTERS

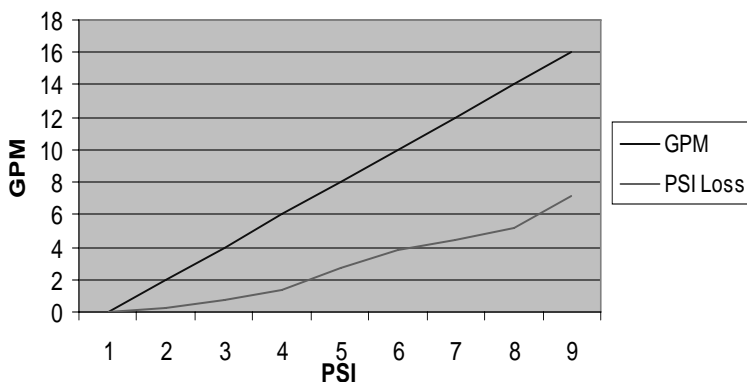

Spintech® filters force water through a directional flow tube that disperses it across the entire inside surface area of the stainless steel screen. The unique directional flow tube does not restrict flow, or create pressure loss. The Spintech® line of Y-Filters come standard with a manual ball valve and are available with an optional automatic self cleaning flush valve. The selfcleaning version will flush the screen area at the pressurization and depressurization of each cycle.
